1 Document Overview

This sample document is designed to exercise the Pandoc template and Lua style filter. It includes headings, paragraphs, emphasis, links, block quotes, lists, figures, standard tables, custom-width tables, code blocks, and a landscape section.

The text also includes **bold text**, *italic text*, `inline code`, and a link to Baker Hughes.

1.1 Purpose

The purpose of this file is to provide a repeatable conversion input for PDF style testing. The generated PDF should show the front page, table of contents, running header, footer, page numbers, table captions, figure captions, and section-based numbering.

1.2 Nomenclature and Abbreviations

API	Application Programming Interface
BOM	Bill of Materials
CIL	Component Information Library
CLI	Command Line Interface
CSV	Comma-Separated Values
GUI	Graphical User Interface
HTML	HyperText Markup Language
JSON	JavaScript Object Notation
MCS	Modular Control System
PDF	Portable Document Format

QA	Quality Assurance
RGB	Red, Green, Blue
SDK	Software Development Kit
SSRS	SQL Server Reporting Services
SVG	Scalable Vector Graphics
TEX	TeX Typesetting Source
TOC	Table of Contents
URI	Uniform Resource Identifier
URL	Uniform Resource Locator
XML	Extensible Markup test

1.3 Links and Cross References

This section tests common link formats: an inline external link to Baker Hughes, an automatic URL <https://www.bakerhughes.com>, an email link to documentation@example.com, a local file link to the random photo, and a reference-style link to Pandoc documentation.

Internal document links should jump to the target section, such as Figures, Tables, and Unnumbered Sample Section.

Cross references should keep the section-based numbering in the PDF: see Section 3, Figure 3-1, Figure 3-2, Table 4-1, Table 4-3, and Table 6-1. Auto-numbered row references should also resolve, for example Item 1 and Item 3.

1.3.1 Scope

This section confirms that third-level headings render with the expected spacing and typography.

This is a block quote. It should remain readable and should not collide with surrounding body text or section headings.

Unnumbered Sample Section

This heading uses Pandoc's `{.unnumbered}` attribute. It should render without a section number while keeping the normal heading style.

2 Lists

2.1 Bullet Lists

- First-level bullet item.
- Another first-level bullet item with a longer sentence to check wrapping and left alignment.
 - Second-level bullet item.
 - Another second-level bullet item.
 - Third-level bullet item.
 - Another third-level bullet item.

2.2 Numbered Lists

1. First numbered item with enough text to wrap onto a second line in the PDF.
2. Second numbered item.
 1. Nested numbered item.
 2. Second nested numbered item.
 1. Third-level numbered item.
 2. Another third-level numbered item.

3 Figures

Figure 3-1: Baker Hughes logo test image

The figure above checks image placement, caption styling, and section-based figure numbering.

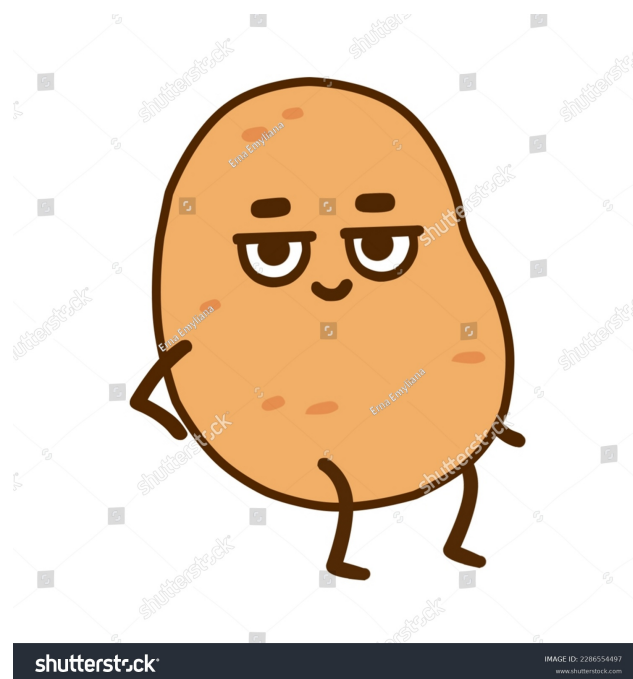

Figure 3-2: Random photo test image

The second figure checks a local image that sits beside this Markdown source file.

4 Tables

Table 4-1: Standard two-column table

Field	Value
Product	Aptara MCS
Document Number	AAA693120-TEST
Revision	015
Owner	Engineering Documentation

Table 4-2: Standard three-column table

Step	Owner	Description
1	Engineering	Prepare source Markdown and metadata.
2	Documentation	Convert Markdown to PDF using the Pandoc template.
3	Review	Check front page, TOC, headers, footers, and tables.

Table 4-3: Custom-width table using the style filter

ID	Area	Verification
T-01	Header	Product, title, document number, revision, and date are visible.
T-02	Footer	Copyright, confidentiality, and page number are visible.
T-03	Table	Header row uses the configured dark background and white bold text.

Table 4-4: Auto-numbered item table with colored cells

Item	Check	Status
1	Metadata revision and document fields (1)	Ready
2	Figure, table, and item cross references (2)	Needs review
3	Final PDF approval before release (3)	Blocked

Notes: (1) Metadata fields come from the document YAML block.
(2) Cross references are resolved by LaTeX labels generated by the Lua filter.
(3) Status cell colors are controlled by RGB values in the Markdown source.

The auto-numbered item table should allow normal text to refer to individual rows. For example, Item 1 checks metadata, Item 2 checks references, and Item 3 tracks release approval.

Table 4-5: Long table spanning multiple pages

Row	Category	Description
01	Long table	This row is part of a long table used to verify page breaks.
02	Long table	The header row should repeat when the table continues on the next page.
03	Long table	Captions should keep the Table a-b numbering format.

Row	Category	Description
04	Long table	Body rows should remain inside the page margins.
05	Long table	The footer should stay at the bottom of each page.
06	Long table	This row adds enough content to force a page break.
07	Long table	This row adds enough content to force a page break.
08	Long table	This row adds enough content to force a page break.
09	Long table	This row adds enough content to force a page break.
10	Long table	This row adds enough content to force a page break.
11	Long table	This row adds enough content to force a page break.
12	Long table	This row adds enough content to force a page break.
13	Long table	This row adds enough content to force a page break.
14	Long table	This row adds enough content to force a page break.
15	Long table	This row adds enough content to force a page break.
16	Long table	This row adds enough content to force a page break.
17	Long table	This row adds enough content to force a page break.
18	Long table	This row adds enough content to force a page break.
19	Long table	This row adds enough content to force a page break.
20	Long table	This row adds enough content to force a page break.
21	Long table	This row adds enough content to force a page break.
22	Long table	This row adds enough content to force a page break.
23	Long table	This row adds enough content to force a page break.
24	Long table	This row adds enough content to force a page break.
25	Long table	This row adds enough content to force a page break.
26	Long table	This row adds enough content to force a page break.
27	Long table	This row adds enough content to force a page break.
28	Long table	This row adds enough content to force a page break.
29	Long table	This row adds enough content to force a page break.
30	Long table	This row adds enough content to force a page break.
31	Long table	This row adds enough content to force a page break.
32	Long table	This row adds enough content to force a page break.
33	Long table	This row adds enough content to force a page break.
34	Long table	This row adds enough content to force a page break.
35	Long table	This row adds enough content to force a page break.
36	Long table	This row adds enough content to force a page break.
37	Long table	This row adds enough content to force a page break.
38	Long table	This row adds enough content to force a page break.
39	Long table	This row adds enough content to force a page break.
40	Long table	This row adds enough content to force a page break.
41	Long table	This row adds enough content to force a page break.
42	Long table	This row adds enough content to force a page break.
43	Long table	This row adds enough content to force a page break.
44	Long table	This row adds enough content to force a page break.
45	Long table	This row confirms the long table can continue after a page break.

5 Code

The following block checks monospace rendering and spacing.

```
local function example(value)
  if value == nil then
    return "missing"
  end
  return tostring(value)
end
```

6 Landscape Content

6.1 Wide Table

This section is wrapped in a landscape Div. It should start on a new page and return to normal portrait pages afterward.

Table 6-1: Landscape verification matrix

Requirement	Input	Expected Output	Status	Notes
Front page	Metadata block	Cover page with title and document information	Pass	Uses Pandoc template variables.
TOC	Headings	Contents page with dotted leaders	Pass	Uses section and subsection entries.
Standard table	Markdown pipe table	Styled longtable output	Pass	Handled by Lua filter.
Custom widths	Div attribute widths	Column widths follow provided ratios	Pass	Uses .table-cols.
Landscape	Div class landscape	Wide content appears on a landscape page	Pass	Uses .landscape.

7 Final Section

This final section confirms that content after the landscape block returns to normal portrait layout with the standard page header and footer.

8 Second Landscape Content

8.1 Second Wide Table

This page verifies that a second landscape block still keeps the header and footer at the top and bottom of the page.

Table 8-1: Second landscape verification matrix

Area	Expected Result	Actual Check	Status
Page orientation	A4 landscape page size	Header remains horizontal at the top	Pass
Footer placement	Footer remains horizontal at the bottom	Page number stays in the bottom-right corner	Pass
Table width	Table uses the available landscape width	Columns remain readable	Pass
Restore behavior	Next page returns to portrait	Follow-up section uses portrait header and footer	Pass

9 Post-Landscape Portrait Check

This page verifies that the document returns to normal portrait layout after a second landscape page. The footer should sit at the bottom of the portrait page, and the header should use the standard portrait width.
